

Drainage and Erosion Control

Foundation failures due to storms, water leaks, and erosion can lead to expensive repairs and a loss in property value. The good news is that proper prevention can be a lifesaver. Our services include erosion prevention and drainage control, and we help keep your property safe by implementing clear and effective prevention strategies.

Drainage and Erosion Control Services

Hardscape Designs

Hardscape designs allow us to help you create aesthetic outdoor areas without grass and plants that don't require watering and irrigation. Hardscape designs also retain minimal amounts of water.

Dry Creek Beds

Dry creek beds are excellent for effortless water drainage and add value to your property! Some choose to install these for visual value alone—a simple solution that can successfully prevent erosion.

Streambed Stabilization

If you have flowing water on your property, any work in or around the streambed must be carried out with care, as the contrary could lead to long-term erosion problems. EarthWorks specialize in this practice and can review any previous work performed on your property to prevent future damage.

French Drain Systems

Installing a french drain system can save your property from erosion by leading water away from the surface and any built structure.

Custom Drainage Designs

We are dedicated to finding solutions that blend into your landscaping design while providing sufficient value in water drainage and erosion prevention.

Downspout Drainage

By installing downspout drainage, the water spilling out of your gutters can be led away from your property foundation and safely disposed of. This allows you to redirect rainwater to an area where it can come to better use.

Catch Basins

Another landscaping solution is installing catch basins, which also work to collect and drain water that would otherwise collect in a specific area.

Bio-Retention Ponds

Designed to slow down rain, storm, and flood water, bio-retention ponds and systems can be key to efficiently removing excess water.

An Ounce Of Prevention Goes A Long Way

Erosion isn't always noticeable, and it could be too late by the time it's brought to your attention. The EarthWorks team can help you in the case of an emergency, but the best thing you can do to protect your property is to put preventive measures in place.
